

Cased Hole Managers

03rd to 05th November 2008

The CH Managers course is designed primarily for Base managers, account managers and others with limited knowledge of Sondex production logging and well integrity services. This 2½ day course will provide a deeper insight into the capabilities and limitations of the tools giving managers a better understanding & greater confidence when offering solutions to their customers' problems, and in subsequent discussion & analysis of the results.

Course highlights:

- In-depth coverage of Sondex tools: types, range, applications, and limitations.
- 'How to' provide and run the service, including the design of logging programs, deploying the tools and avoiding problems.
- Comprehensive coverage of the 'end products'.
- The fundamentals of interpretation.

Summary of Topics Covered

Reasons for production logging and casing inspection services
Selling the idea to the client / identifying opportunities
How the tools work, limitations.
